

Error bars are 1,000-replicate paired protein bootstrap 95% CIs. Bars are coloured by evidence type, not by individual method. Hatched slots are methods excluded from scoring: BLAST (top-10) (stored predictions are empty for all ontologies, but blast_hits.tsv contains 7,108 alignments — stale artifact, re-run required); BLAST (max ident.) (stored predictions are empty for all ontologies, but blast_hits.tsv contains 7,108 alignments — stale artifact, re-run required). Generated by src/plot_benchmark.py from results/benchmark_metrics.csv.
