

a**b****c**

Seeded random search, 40 trials (search seed 20260714); learning rate and weight decay log-uniform over $[1e-5, 3e-3]$ and $[1e-7, 1e-2]$, remaining hyperparameters categorical. Not a grid and not Bayesian. Each line is one trial across all 9 tuned hyperparameters. Color is Uniform Score $\in [0, 1]$ with the scale clipped to the observed range rather than 0-1, so mid-tier trials remain distinguishable. focal_gamma is conditional on the Focal loss and is undefined for BCE trials. Generated by `src/plot_arc_tuning.py` from `hybrid_search/trial_*/config.json`.
