

Rows are input modality, columns are GO sub-ontology, and each panel shows the five architectures on a shared y-axis — modality is a facet rather than a marker shape, so no symbol decoding is required. Points are individual seeds; the horizontal bar is the mean with error bars show mean $\pm$ s.d. across $n = 5$ training seeds. † marks the MLP structure-only constant-predictor control. F_{max}/S_{min} favour graph-aware Hybrid/Hybrid_JK. Under structure-only, MLP/GAT/GCN reach exactly the predict-nothing S_{min} (the test set's total IC), while Hybrid/Hybrid_JK saturate above the 0.99 threshold-scan bound and predict everything; both are degenerate, not tuned trade-offs. Generated by `src/plot_arc_ablations.py` from `ablations/**/test_metrics.json`.
