

a**b**

The split clusters at 30% identity with 80% coverage, but it is not leakage-free and is not described as such. 142 of 754 test proteins have any BLAST hit to the training set, and 116 (15.4%) retain at least 30% identity to a training sequence; 31 reach 60% or more. Performance stratified by these bins is reported separately so results at low identity can be read independently of the residual. Generated by `src/plot_reviewer_figures.py` from `preprocessing/data_arc_rebuild_2026_07_14/pdb_splits/threshold_30/blast_te_vs_tr.tsv`.
